

IT'S ALL IN THE COATING!

SURFACE
FINISHING WITH

wet coating

Every perfect surface starts with comprehensive consultation.

We will meet with you to determine which wet coating technique is best suited for your application(s).

We will take time to ensure, down to the smallest detail, that your needs are catered to.

Our core areas of expertise are material-specific pretreatment and providing professional wet coatings for a huge variety of materials, including metals, plastics and wood.

Coating techniques:

- ✓ 1K and 2K primers and top coat lacquers
- ✓ Smooth, textured and effect coatings
- ✓ High-gloss finishes
- ✓ Huge variety of colors
- ✓ Multilayered color structures
- ✓ Coatings to specification

Arno Winkler

Your contact

Professional pretreatment is the foundation that ensures optimum coating adhesion.

Preliminary tasks such as leveling, filling and sanding are important in making sure the surface will look right once it is finished.

What you expect from your coated surface determines which basic components will be right for you.

Wet coating

Our passion in all the colors of the rainbow

Following careful pretreatment, a thin layer of liquid coating is applied to the components. Chemical or physical processes (e.g. evaporation of the solvent) then

form a uniform, aesthetically pleasing protective coating on your products. No matter what your requirements, we can find the right custom surface coating solution.

The benefits

- ✓ Multilayered color structures
- ✓ Multicolored coatings
- ✓ Huge pallet of effects and color options
- ✓ Choice of both color and coating material
- ✓ Suitable for use with all partial geometries and surface shapes
- ✓ Very high level of corrosion protection
- ✓ High mechanical resistance
- ✓ Resistant to many chemicals
- ✓ Very high weather resistance

Our services

- ✓ Contract coating primarily for commercial customers
- ✓ Priming to specification
- ✓ Steelwork-quality smooth coatings
- ✓ Textured coatings
- ✓ Microtexture coatings
- ✓ Multilayered systems
- ✓ Coatings to match your existing works standards
- ✓ Layering proposals to suit your requirements

It's all in the coating

All-round protection – quick and reliable

Our production hall is suitable for objects with dimensions of 1000 x 2000 x 3500 mm and a total weight of max. 100 kg. Of course, we will also do our best

to handle heavy objects upon request. With us, your small parts are in good hands. We employ the utmost care and expertise when surface-finishing your products regardless

whether they're individual parts or whole series. For us, every individual piece is important.

Material

We coat materials such as metal/chromium steel, aluminum, sheet metal (Sendzimir galvanized, electrogalvanized), plastics and wood. Full-surface coatings or with cover-ups for uncoated areas – whatever you need.

Packaging and logistics

All of your coated parts will be packed carefully for safe transport. Transport times are kept to a minimum, thanks to short travel distances,

streamlined organization, expert personnel and reliable partners.

Quick and easy to find.
We are based in Altstätten, in the
Swiss Canton of St. Gallen, making
us easily accessible from anywhere
in the Rhine valley. Do contact us; we
look forward to hearing from you.
